

# APOS Storage Center

## Archive, Backup and Selective Restore

- **Efficiency** – Restore deleted content quickly and easily to location of choice
- **Privacy** – Maintain privacy requirements for documents of record
- **Security** – Maintain administrative, physical, and technical security safeguards required for regulatory compliance
- **Audit** – Comply with policies, procedures and technology in alignment with legislated standards

APOS Storage Center automates the archive and restore functions in your SAP BusinessObjects deployment, helping you to manage the document lifecycle, safeguard data privacy, and achieve regulatory compliance.

It features automatic backup, restoration of selected documents and report objects to a location of your choice, and versioning. Storage Center also provides both online and offline storage, letting you balance disk space, performance and audit requirements, and its extract and export features make it an essential tool for migrating instances between BusinessObjects deployments. Storage Center should be a key ingredient in any BusinessObjects disaster recovery plan.

APOS Storage Center enables automated, rules-based cleanup of your BI environment, so you can optimize your SAP BusinessObjects deployment and serve your information consumers more effectively and efficiently.

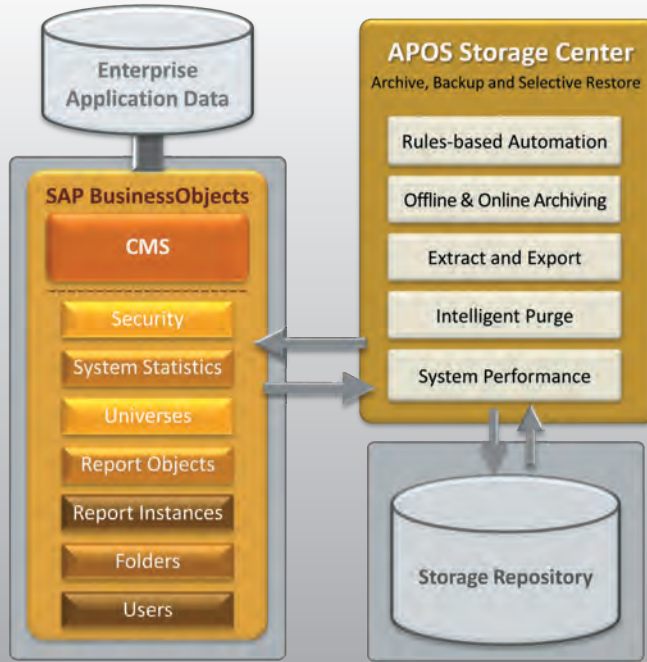

**Well Managed BI**

# APOS Storage Center

Archive, Backup and Selective Restore

## Component Architecture Diagram

APOS Storage Center provides the following critical capabilities for SAP BusinessObjects:

- **Rules-based backup, archive, versioning, selective restore** - Storage Center provides rules-based backup, archive, versioning and restore, letting you automate the backup process and restore selected documents of record to a location of your choice in order to both facilitate and limit auditor access.
- **Offline and online archiving** - Storage Center enables both online and offline archive strategies. Online storage maintains documents of record within the SAP BusinessObjects system while hiding them from queries to improve processing. Offline storage maintains document instance integrity outside the SAP BusinessObjects system.
- **Extract and export** - Storage Center's extract and export features maintain document of record integrity for the migration process. The ability to export to other formats is crucial, because changes in the environment can make it impossible to restore the original document instance. Storage Center allows administrators to restore the original, the exported version, or both.
- **Versioning, purging, retrieving Web Intelligence reports** - In organizations that make extensive use of Web Intelligence reports, the versioning provided by Storage Center is invaluable, because "Webi" reports can be changed easily by users. Storage Center provides an intelligent means to purge Webis while retaining retrievable versions, and enabling regulatory compliance.
- **System performance improvements** - Storage Center limits the number of document instances the system has to search through archiving (either online or offline), improving response times.

Formed in 1992, APOS Systems is a global provider of solutions which enable well managed business intelligence.

APOS solutions improve the return on your BI investment through enhanced BI platform management, providing: automated and simplified administration; detailed platform auditing and monitoring; robust archive, backup and restore capabilities; enhanced content publishing and distribution; detailed BI query awareness and controls; and targeted solutions to speed and streamline your platform migrations.

APOS solutions simplify, automate, complement and extend your BI platform management practices.
