APOS Publisher for Cloud

APOS Publisher for Cloud is a software solution that automates the generation of tailored versions of report content from SAP Analytics Cloud (SAC), and then distributes that analytics content out to targeted users and locations.

The solution functions to broadcast personalized analytics to the right people, at the right time, and in the right format.

Success Story: Customer Analytics

NLMK Europe – European based steel producer (Belgium, Denmark, France, Italy) focused on steel production for the automotive, shipbuilding, construction and energy production industries

- Sales operations needed view of ready-to-ship product to be provided to customers on a regular basis
- Key information for managing customer expectations and addressing effective shipping arrangements
- Provision of both PDF and spreadsheet format, enabling customers to continue analysis and internal communications with data from the spreadsheet

APOS
CUSTOMER SUCCESS STORY

**FOCUS CUSTOMER -
NLMK EUROPE**

NLMK Europe is a steel producer that employs almost 2,000 people at production facilities in Belgium, Denmark, France and Italy with an annual production capacity of 3.1 million tonnes of value-added steel products per year. They focus on processing steel close to customers in the automotive, shipbuilding, construction and energy-production industries.

CHALLENGE

NLMK started working with SAP Analytics Cloud (SAC) and the SAP Business Technology Platform (BTP) in 2018. With growth in demand for reporting by internal users, NLMK needed to establish a publishing strategy with SAP Analytics Cloud. Specifically, their sales back-office needed a view of ready-to-ship product information to broadcast to individual customers in a timely manner and in preferred formats, to provide their customers with an overview of product to expect and to confirm shipping arrangements. They had been using static lists generated by their manufacturing system as PDF files, but their customers had expressed a preference for Excel spreadsheets that would allow them to work with the provided information and prepare them for presentations.

NLMK Europe – “Push” Publishing with APOS Publisher for Cloud

“Push” Publishing
With widely distributed management and facilities, NLMK needs to broadcast information to consumers who cannot log in to SAP Analytics Cloud, or who do not log in on a regular basis. APOS Publisher for Cloud allows them to do this in a scheduled and timely manner.

Format Control
To meet the preferences of their customers, NLMK wants to provide information to them in their preferred formats, initially as Excel spreadsheets, but possibly expanding to other format types such as PowerPoint.

High-Volume Email Bursting
With approximately 160 reports that need to be burst in a timely manner, NLMK needs a publishing solution that can manage that volume and scale to higher volume over time.

Information Control
NLMK uses APOS Publisher for Cloud’s automated, data-driven publishing capabilities to ensure each information consumer receives only the information to which they are entitled.

Information Accountability
By allowing NLMK to make critical information directly and easily available for their information consumers through push publishing, APOS Publisher for Cloud encourages those information consumers to be accountable and responsible for that information.

SOLUTION

When NLMK searched for a solution, APOS Publisher for Cloud was the clear solution to meet all the required functionality:

Targeted Distribution
Dynamic, data-driven process provides customized analytics exclusively to the people who need it, when they need it.

Report Consolidation

- Consolidate multiple stories/pages to single email/document
- Minimize the amount of emails a given user receives
- Summarize all reports into one email/document

The screenshot displays a web application interface for a sales report. At the top, there is a navigation bar with the APOS logo. Below it, a 'Table of Contents' sidebar is visible, listing four sections: 1. Overview, 2. Weekly Sales Account Data, 3. APOS System Sales Report Data, and 4. APOS System Sales Report Data. The main content area features a map of the United States with data points representing sales locations. Below the map, there are two charts: a donut chart for 'Sales Revenue per City' and a bar chart for 'Quantity Sold per Product'. The donut chart shows the following distribution: South (31.75%), West (28%), Midwest (7.42%), New England (5.16%), Southwest, and Atlantic. The bar chart shows the following quantities sold: Household (466,890.00), Apparel (369,869.00), and Grocery (13,064.00). A 'Filter by Store' sidebar on the right allows filtering by Store ID, with a search box and a list of store IDs from ST1 to ST1014.

- High volume data export
- High performance when exporting

Regional Sales

Widget Level Bursting

Widget Level Bursting

- Selective burst of only components of a report
- Define which widget from which report page
- Only that widget gets sent to recipients

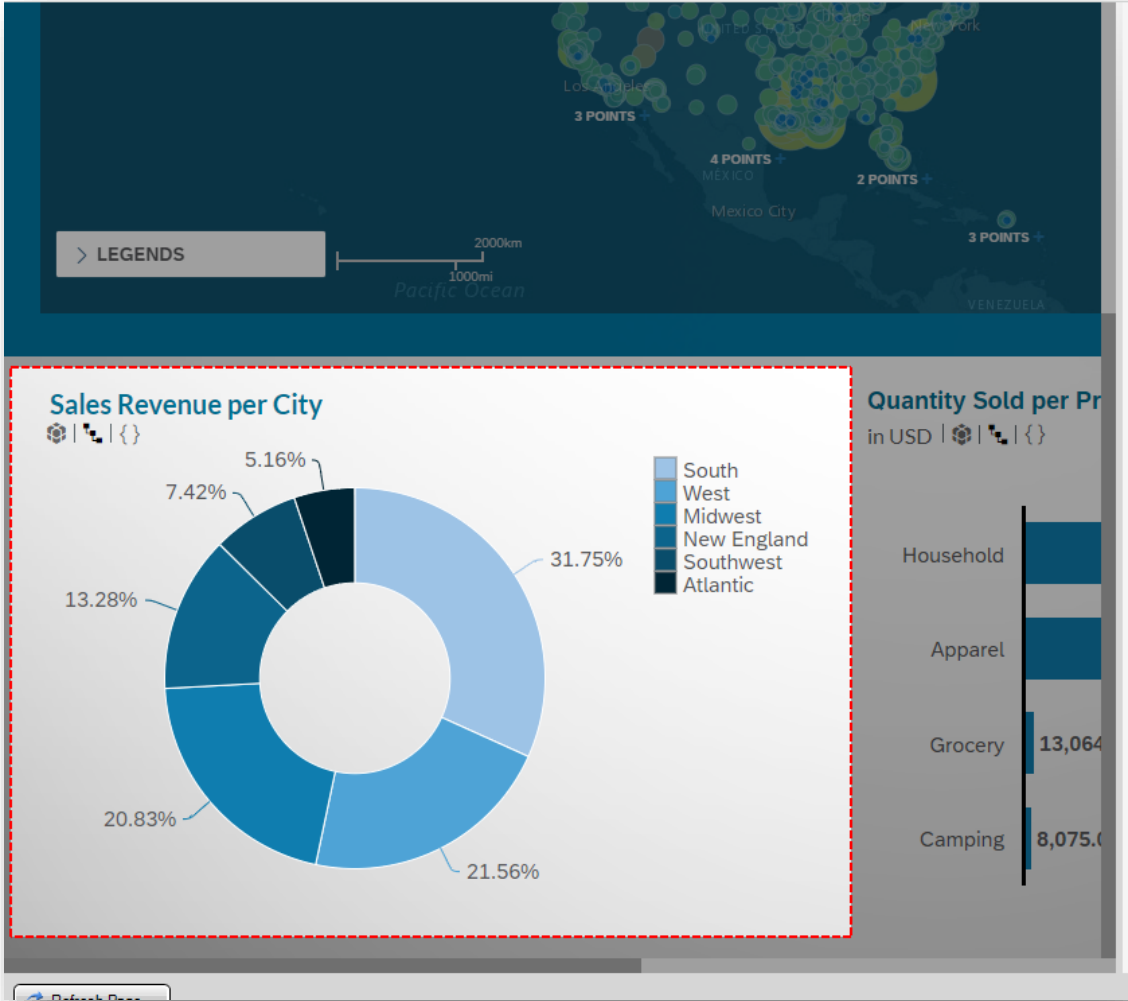

- Allows for focus of most critical information
- More tailored distribution of targeted information being sent to the relevant users
- Simplified user consumption of information

Widget Level Bursting

Widget Level Bursting

- Target specific widgets/charts on an SAC page
- Tailor exactly what the recipients receive

APOS Publisher for Cloud

Demonstration

To view demonstrations and videos from this presentation, [view the webinar on demand](#)

Customer Success

Hunt LNG - South American liquefied natural gas production and supply company uses Publisher for Cloud to generate individualized SAC reports focused on production and contractor reporting, which are then distributed to key managers by email.

- Weekly KPI reports to managers which flags **key pipeline information** that requires their attention.
- Weekly reports to supervisors identify **workplace safety incidents** requiring corrective action.
- Weekly reports to managers providing vacation time and requests to support proper management of **requests and adequate staffing coverage**.

APOS
CUSTOMER SUCCESS STORY

Hunt
OIL COMPANY

**FOCUS CUSTOMER -
HUNT OIL COMPANY – PERU LNG**

Hunt Oil Company is a privately held exploration and production company that has successfully conducted petroleum operations for more than 80 years. Today, it is one of the world's leading independent energy companies, with operations in North America, South America, Europe and the Middle East. The company has drilled wells on every continent except Antarctica. The Peru LNG operation consists of a gas liquefaction plant, the first in South America, which processes 4.45 million tons of natural gas per year, a 408-kilometer pipeline across the Andes, and a marine terminal on the Pacific coast of Peru.

CHALLENGE

Hunt uses SAP Analytics Cloud to dashboard their KPIs and analyze operational, resource, and quality data. Real-time reporting is essential to ensure efficient and safe production and transportation of the liquefied natural gas (LNG) product. They needed a publishing solution to push management information out on a scheduled basis to both SAC and non-SAC users, in the office and in the field, as well as to provide automation to ensure that immediate attention is given to critical operational data and events.

To meet these needs, a member of their SAP account team pointed them to APOS.

QA, Health & Safety, Environmental Reporting
Hunt sends weekly reports to managers and supervisors identifying reported incidents which require corrective actions to ensure the safety of its employees.

Pipeline Reporting
Hunt sends a weekly KPI report to managers and supervisors with flags on information which requires their attention. Each report is between 3 and 4 pages and is delivered in PDF format.

Enterprise Scheduling

BW / Datasphere User-Based Broadcasting

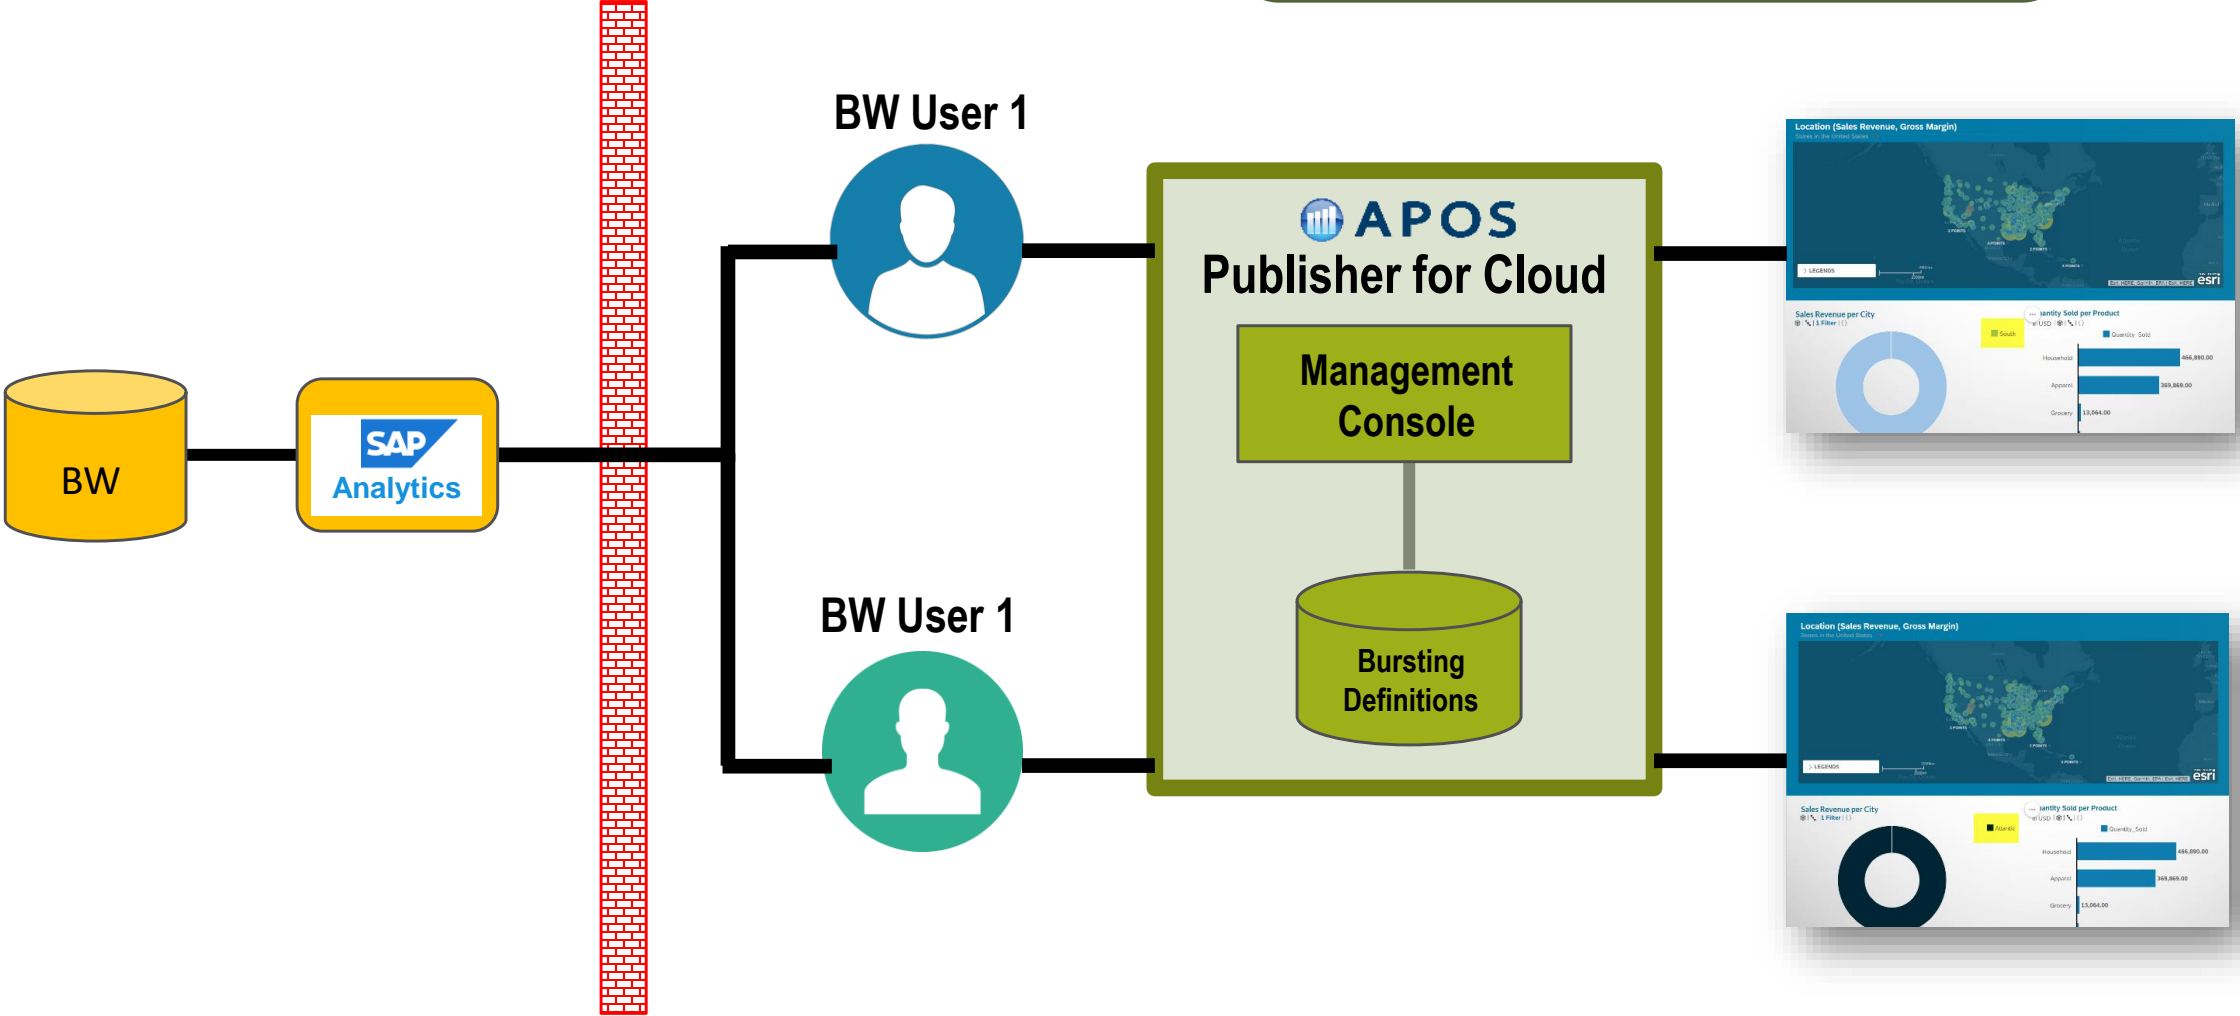

BW / DWC User-Based Broadcasting

- Automatically broadcasting BW-based or DWC-based stories based on BW or DWC authorizations
- Automatically generating and distributing BW-based or DWC-based reports on behalf of BW or DWC users while retaining their authorizations
- Available to support other live data sources also

Enterprise Scheduling

BW / Datasphere
User-Based Broadcasting

Enterprise Scalability

Distributed Processing

High Availability & Failover

Targeted Processing

Enterprise Scalability

Distributed Processing

- Broadcast is scalable both horizontally and vertically
- Setup multiple processing servers for high performance and high volume broadcasting

Enterprise Scalability

High Availability & Failover

- Configure multiple
 - Scheduling servers
 - Processing servers
 - APOS P4C database replication

Providing you with high availability and failover on your broadcasting platform.

Enterprise Scalability

Targeted Processing

- Targeted processing allows you to specify which server is going to process your broadcast.
- Targeting a specific processing server gives flexibility
 - If one server has more RAM or CPU than another for larger broadcasts
 - If one server has Office installed and the other doesn't for exporting to Excel/PPT/Word

Enterprise Security

Security & Permissions

Administration

Enterprise Security

Shared & Private Content

- Shared & Private Data Sources
- Shared & Private Bursting Definitions

Enterprise Security

Shared & Private Data Sources

Shared & Private Data Sources

- Bursting data sources contain:
 - Email addresses, filter values, destinations & format settings, SAC story IDs and model names, dimension names
- Data sources can be made public for broad access by those creating bursting definitions
 - Improved productivity, by reuse of existing definitions
 - Minimize errors and incorrect settings
 - Reduced IT maintenance of distribution lists

Enterprise Security

Shared & Private Bursting Definitions

Shared & Private Bursting Definitions

- Have your own set of private bursting definitions that is only relevant to you
- Collaborate on shared bursting definitions that can be managed by more than one user

Enterprise Security

Enhanced Security

Users and Groups

- Individual user profiles
- Create defined groups to segregate users across business units and sub-units

Enterprise Security

Enhanced Security

Access Rights

- Administrative controls to define:
 - Which user groups can access which folders
 - Which rights those users have
- Enables stronger controls for secure usage of the solution across multiple business units of an organization

Enterprise Security

Enhanced Administration

Enhanced Administration

- Administrator can view and track
 - When users create, delete, modify
 - What machines they are logging in from
 - When potential issues arise
- Recycle bin allows the administrator to restore content that users may have accidentally deleted

Customer Success

Automotive Industry – European company involved in automotive import, distribution, leasing and fleet management services

- **Automated, timely distribution of user specific** reports to key business stakeholders
- Monthly distribution of reports via email in PDF format to **internal users** and externally to their **partner network**
- Controlled report distribution only when **conditional criteria** is met
- Effective visibility, **process monitoring and controls** needed

 **PUBLISHER FOR CLOUD USE CASE**

CHALLENGE:

A major European company involved in automotive import, distribution, leasing and fleet management services needed timely distribution of SAP Analytics Cloud report content to key business stakeholders. Their information requirements included monthly distribution of reports to internal business users and externally to their partner network. The content of these reports must be filtered to ensure that recipients receive only data to which they are entitled, and that conditional business rules can govern aspects of how the distribution process is executed. Additionally, this organization needed strong visibility into the distribution process in order to monitor its success and to ensure delivery.

Requirements: Timely Report Distribution to Internal and External Recipients

 **TIMELY SCHEDULING OF SAC REPORTS**

Automation needed to send SAP Analytics Cloud reports to internal and external recipients, both SAC & non-SAC users, to ensure that they had current information.

 **PERSONALIZED, USER-SPECIFIC SAC REPORTS**

Emails and attached PDFs sent to internal and external recipients needed to be personalized with appropriate details for each recipient.

 **CONDITIONAL REPORT DISTRIBUTION**

Emails to external recipients should only be sent if new information relevant to those recipients is available.

Solution:

Publisher for Cloud – Fulfill BEx Broadcast Scenarios

 **APOS**

 **PUBLISHER FOR CLOUD USE CASE**

CHALLENGE:
REPLACING BEX BROADCASTER IN AN SAP BW/4HANA ENVIRONMENT

A leading, highly diversified, agricultural sciences manufacturer has been using BEx Broadcaster with SAP BW to keep its large network of customers, partners and resellers informed. The company planned to move their SAP BW deployment to SAP BW/4HANA, and needed to replicate BEx broadcasting capabilities on the new platform.

Requirements: High-Volume, Targeted Distribution & Multiple Formats

    **FORMATS**

 They needed to broadcast multiple formats such as Excel and PDF, and to be able to include multiple formats per email.

DYNAMIC FORMATTING

They needed a large number of columns to fit within a landscape-mode PDF, and include color coding to emphasize key KPIs. Requirements also included a dataset that would vary in the number of rows being distributed, and formatting needed to adjust

THE BEX BROADCASTING NEED AND SAP ANALYTICS CLOUD

By Tom Woodhead

Digital transformation is essential to meeting the future, but there will always be challenges, and those responsible for implementing transformative technology must also look at users' needs and expectations in the present as well as in the future.

Digital transformation should be driven by business process transformation. While the new technology's core capabilities are essential to transformation, they do not necessarily account for all of the very specific business process workflows embedded in the outgoing technology platform.

BEX BROADCASTING & SAP BW/4HANA

BEx broadcasting has been an important tool for organizations using BW. It has effectively served important communication workflows over the past twenty-plus years, allowing organizations to distribute reports to a wide variety of users, partners and customers. However, with the need to push content out to stakeholders continuing to be a critical requirement for many of these organizations, and with this capability not available in SAP BW/4HANA, such organizations need to deploy an alternative to BEx broadcasting as part of their move to BW/4HANA.

APOS Publisher for Cloud – Future Releases

Roadmap Themes

- Collaboration ✓
- Scalability ✓
- Self-Service

APOS Solutions for SAP Analytics Cloud

APOS Live Data Gateway

- High performance, live data connectivity from SAC to wide range of data sources

APOS Publisher for Cloud

- Automated broadcasting and distribution of personalized SAC reports to target user groups

APOS Insight for Cloud

- Enhanced Monitoring, Auditing and Report Testing for SAP Analytics Cloud

APOS Solutions for SAP BusinessObjects

APOS Insight

BI System Auditing

- System Inventory
- Security Analysis
- System Usage Analysis
- Report Impact Analysis

BI Report Testing

- Automated Report Testing
- Regression Testing
- Validation of Report Data
- Report Performance Testing

BI System Monitoring

- Advanced System Monitoring
- Operating Environment Monitoring
- Database Monitoring
- Process Monitoring

BI Query Surveillance

- Real-time BI Query Monitoring
- Query Performance Alerting & Auditing
- Query Intervention; Remote Cancelling
- Sensitive Data Audit

APOS Administrator

Object Management

- Bulk Security Management
- Bulk Settings Management
- System Objects Promotion
- Connections Maintenance

Schedule Management

- High-volume schedule management
- Multiple schedule properties editing
- Grid scheduling interface
- Repeatable scheduling templates

Instance Management

- Manage entire instance inventory
- Granular instance search
- Stop, pause, release, reschedule
- Rapid recovery to failed schedules

APOS Storage Center

- System Backup
- Content Archiving
- Content Versioning
- Selective Restoration
- Automated System Clean Up

APOS Publisher

- Systematic Content Delivery
- Advanced Document Bursting
- Enhanced Content Distribution
- Security and Encryption
- Statement Generation

APOS Web Intelligence Migrator

- Bulk conversion of Universes from UNV to UNX
- High-Volume Report Web Intelligence reports
- Success validation
- Controlled, project-based workflow

STREAMLINE YOUR MOVE TO UNX UNIVERSE

Freemium Upgrade Offer

APOS Web Intelligence Migrator

INVENTORY SYSTEM CONTENT

Detailed view of universes and reports for effective project planning

BULK CONVERSION OF UNIVERSES

High-volume conversion of universes from UNV to UNX format

HIGH VOLUME REPOINTING OF REPORTS

Scan and repoint Web Intelligence reports in bulk from old UNV to new UNX

VALIDATE UPGRADE SUCCESS

Automated testing of reports to validate successful and accurate migration

STRONG PROCESS CONTROLS

Enterprise-grade controls to synchronize and scale your migration processes

APOS Freemium Offer

Free Production deployment use of APOS Web Intelligence Migrator:

- Scan and inventory your SAP BI systems
- Bulk convert all UNV universes to UNX
- Bulk repoint up to 200 WebI reports
- Validate migration success
- 100 days of free use
- Inventory multiple systems
- Guidance and support

Solution Update for SAP Analysis for Office Users Product Status, Roadmap, and Options

Webinar - 15. Juni - 17 Uhr CET

Join this session to hear from Jeanne Bigonnet of SAP about the latest news and options available for the SAP Analysis for Microsoft Office user community. As SAP's Product Manager for Microsoft Office integration solutions, Jeanne will provide the most current solution updates and roadmap considerations available for:

- SAP Analysis for Office, Standard Edition
- SAP Analysis for Office, SAP Analytics Cloud Edition
- SAP Analytics Cloud Add-in for Microsoft Office
- SAP Analytics Cloud Repository Integration
